ABOUT

I started in the programming world in September 2021, a journey that continues until today. From the day I started until now I learned a lot of technologies. I`ve made automation in Python to pages in react. Little by little I have become a better developer.

SKILLS

React.JS | Python | CSS | HTML
Node.JS | AdonisJS | Figma |
TypeScript | JavaScript | MySQL
| MongoDB | PHP

LANGUAGES

Portuguese - native
English - advanced

COURSES

Estudonauta
B7web
Bring your own laptop
The net ninja
Origamid

EXPERIENCE

Engineering Assistant
Store administrative assistant

PROJECTS

My Portfolio: https://i3run01portfolio.netlify.app
I realized this project with React.JS, I had used ContextAPI to work with global variable, I also worked with components and CSS animations.

Price automation with Python:
It was the first project I`ve already done, I made this project to correct the price automatically of the products that arrived in the market that I had worked.

Keyboard project: https://i3run01.github.io/Proj-Keyboard/
I realized a responsive keyboard with JavaScript, CSS, and HTML only, if the screen is a desktop screen, the keyboard will have the layout of a desktop keyboard. The opposite is also true, if the screen is a phone screen, the keyboard will be a phone keyboard.

HOBBIES

Ride a bike
Play video-game
Watch movies and series
